Toronto, ON, Canada | yang.lu.tech@gmail.com | linkedin.com/in/-yang-lu

## SUMMARY

Software engineer with experience building LLM applications, agent infrastructure, evaluation systems, and production web services. Built a deployed LangChain RAG application, an open-source multi-model evaluation toolkit, and reliability improvements for an open-source agent platform. Brings hands-on Python, Java, TypeScript, REST API, Docker, CI/CD, PostgreSQL, and AI-assisted development experience relevant to Workday's Agent Factory.

## SKILLS

Languages: Python, Java, TypeScript, JavaScript, SQL

AI & Frameworks: LLMs, LangChain, RAG, embeddings, LLM-as-judge evaluation, MCP, FastAPI, Spring Boot, Hibernate/JPA, NextJS, React

Tools & Infrastructure: Docker, GitHub Actions CI/CD, Chroma, Hugging Face, OpenRouter API, REST APIs, PostgreSQL, Elasticsearch, Linux, Jira, Confluence

## EXPERIENCE

### AI Engineer

AI Integration Solutions | 02/2023–Present

- Built and deployed a LangChain RAG application ingesting Google Docs, creating overlapping chunks, generating Hugging Face embeddings, retrieving from Chroma, and producing answers through an OpenAI-compatible chat model.
- Created an open-source LLM evaluation toolkit with asynchronous parallel judging across multiple providers, relevance scoring, and latency benchmarking; automated testing and delivery with GitHub Actions and Docker.
- Submitted 10 pull requests to NousResearch/hermes-agent, adding gateway dead-letter queues, 429 exponential backoff with reconnect replay, and CJK search tokenization.
- Applied Copilot, Claude, and IDE agents for design, implementation, testing, and refactoring with review practices for secure, traceable changes.

### Full-Stack Developer

EduTrigger | 07/2023–07/2024

- Developed NextJS, React, TypeScript, and SurveyJS features in Open edX, enabling teachers to create and customize assessments from reusable templates.
- Built a student workflow to import tests and answers from teacher-created templates.
- Integrated REST APIs, debugged request and response flows, and worked with PostgreSQL to deliver end-to-end features.
- Deployed Open edX with Docker and maintained application CSS, images, and configuration.

### Back-End Developer

Alaia Technologies | 07/2016–07/2020

- Extended Spring Boot endpoints and Java batch loaders using Hibernate/JPA to process CREA DDF listing data from REST/XML sources.
- Loaded 150K records per day into PostgreSQL and Elasticsearch through Quartz scheduling.
- Cut photo download times by 50x by replacing FTP with REST and saved more than 1 TB of disk space through automated cleanup.
- Reviewed junior engineers' code and supported Agile delivery through Jira and Confluence documentation.

## EDUCATION

Bachelor of Computing, Teradata Scholarship — Queen's University

Certifications: Hugging Face MCP (10/2025); DeepLearning.AI Data Engineering (06/2025)
